

Arrhoges occidentalis* (American Pelican Foot)*Priority 2 Species of Greatest Conservation Need (SGCN)****Class:** *Gastropoda* (Aquatic And Terrestrial Snails)**Order:** *Littorinimorpha* ()**Family:** *Aporrhaidae* (Pelican's Foot Snails)**General comments:** none**No Species Conservation Range Maps Available for American Pelican Foot****SGCN Priority Ranking - Designation Criteria:****Risk of Extirpation:** NA**State Special Concern or NMFS Species of Concern:** NA**Recent Significant Declines:**

American Pelican Foot is currently undergoing steep population declines, which has already led to, or if unchecked is likely to lead to, local extinction and/or range contraction.

Notes:

recent decline - Trott, in review; last record in Cobscook Bay 1973; climate change - Southward et al. 1995; Schiel et al. 2004; understudied as dredge by-catch, professional judgement

Regional Endemic: NA**High Regional Conservation Priority:** NA**High Climate Change Vulnerability:**

Arrhoges occidentalis is highly vulnerable to climate change.

Understudied rare taxa:

Recently documented or poorly surveyed rare species for which risk of extirpation is potentially high (e.g. few known occurrences) but insufficient data exist to conclusively assess distribution and status. *criteria only qualifies for Priority 3 level SGCN*

Notes:

recent decline - Trott, in review; last record in Cobscook Bay 1973; climate change - Southward et al. 1995; Schiel et al. 2004; understudied as dredge by-catch, professional judgement

Historical: NA**Culturally Significant:** NA**Habitats Assigned to American Pelican Foot:**

Formation Name	Subtidal
Macrogroup Name	Subtidal Coarse Gravel Bottom
Habitat System Name:	Coarse Gravel **Primary Habitat** Notes: adult assumed spawning, egg-laying, adult feeding
Macrogroup Name	Subtidal Mud Bottom
Habitat System Name:	Unvegetated **Primary Habitat** Notes: adult assumed spawning, egg-laying, adult and juvenile feeding
Macrogroup Name	Subtidal Pelagic (Water Column)
Habitat System Name:	Nearshore Notes: larval development and dispersal
Habitat System Name:	Offshore Notes: larval development and dispersal
Macrogroup Name	Subtidal Sand Bottom
Habitat System Name:	Unvegetated **Primary Habitat** Notes: adult assumed spawning, egg-laying, adult feeding

Stressors Assigned to American Pelican Foot:

Arrhoges occidentalis* (American Pelican Foot)*Priority 2 Species of Greatest Conservation Need (SGCN)****Class:** *Gastropoda* (Aquatic And Terrestrial Snails)**Order:** *Littorinimorpha* ()**Family:** *Aporrhaidae* (Pelican's Foot Snails)

Stressor Priority Level based on Severity and Actionability		Moderate Severity	High Severity
	Highly Actionable	Medium-High	High
	Moderately Actionable	Medium	Medium-High
	Actionable with Difficulty	Low	Low

IUCN Level 1 Threat**Biological Resource Use****IUCN Level 2 Threat:** Fishing and Harvesting of Aquatic Resources**Severity:** Severe**Actionability:** Highly actionable

Notes: Large-scale, unintentional catch by commercial trawling reduces population size and subsequently results in local extinctions, impaired role of the functional group "suspension feeders." Likelihood is high (high certainty) and large scale (throughout the region where this species occurs). Actionability is low for incidental catch. Intentional collection by aquarium trade leads to significant population reductions with similar effects. Likelihood is high (high certainty) and small-scale so actionability is high.

IUCN Level 1 Threat**Pollution****IUCN Level 2 Threat:** Agricultural and Forestry Effluents**Severity:** Severe**Actionability:** Moderately actionable

Notes: Loss of habitat due to excessive nutrients, toxic chemicals (including pesticides and chemical therapeutants), and/or sediments originating from aquaculture can reduce populations size. Direct effects could include toxicity of tributyl compounds shown in other gastropods. Likelihood is high (high certainty). Current spatial extent is expanding along coast along with development of the aquaculture industry, so actionability is moderate, i.e. the threat can be minimized in newly developing areas.

IUCN Level 1 Threat**Climate Change and Severe Weather****IUCN Level 2 Threat:** Habitat Shifting or Alteration**Severity:** Severe**Actionability:** Actionable with difficulty

Notes: Ocean acidification may result in decreased survivorship of larvae, and growth and feeding shown in other molluscs. Likelihood is high and large scale. The ability to mitigate ocean acidification is low.

IUCN Level 2 Threat: Temperature Extremes**Severity:** Moderate Severity**Actionability:** Actionable with difficulty

Notes: American Pelican Foot is a cold-water species. Increased water temperatures may have interactive effects with ocean pH decreasing survivorship of larvae and growth rate shown for other molluscs. Likelihood is high (high certainty) and large scale. The ability to mitigate sea temperature change is low.

IUCN Level 1 Threat**Invasive and Other Problematic Species, Genes and Diseases****IUCN Level 2 Threat:** Invasive Non-native-Alien Species-Diseases**Severity:** Moderate Severity**Actionability:** Actionable with difficulty

Notes: Invasive non-native and alien diseases could have effects largely unknown at this time. Likelihood is high and large scale (throughout the region), so actionability is low.

Species Level Conservation Actions Assigned to American Pelican Foot:

None. *Only species specific conservation actions that address high (red) or medium-high (orange) priority stressors are summarized here.*

Conservation Actions Associated with the Gastropods Guild:

Arrhoges occidentalis* (American Pelican Foot)*Priority 2 Species of Greatest Conservation Need (SGCN)****Class:** *Gastropoda* (Aquatic And Terrestrial Snails)**Order:** *Littorinimorpha* ()**Family:** *Aporrhaidae* (Pelican's Foot Snails)

Conservation Action	Category: Public Outreach	Biological Priority: high	Type: on-going
Encourage the use of more targeted fishing gear in order to reduce bycatch and habitat disturbance			

Stressor(s) Addressed By This Conservation Action

Fishing and Harvesting of Aquatic Resources

Conservation Action	Category: Policy	Biological Priority: critical	Type: new
Reduce the collection and possession of live specimens			

Stressor(s) Addressed By This Conservation Action

Fishing and Harvesting of Aquatic Resources

Conservation Action	Category: Research	Biological Priority: high	Type: new
Develop molecular tools to identify where specimens are collected.			

Stressor(s) Addressed By This Conservation Action

Fishing and Harvesting of Aquatic Resources

Conservation Action	Category: Survey and Monitoring	Biological Priority: high	Type: on-going
Ground-truth mapped habitat and compare to historical maps to monitor change over time, may require updating mapping plans to map more frequently			

Stressor(s) Addressed By This Conservation Action

Fishing and Harvesting of Aquatic Resources

Conservation Action	Category: Policy	Biological Priority: critical	Type: new
Reduce the use of tributyltin compounds as a biocide and antifouling prophalactic			

Stressor(s) Addressed By This Conservation Action

Agricultural and Forestry Effluents

Broad Taxonomic Group Conservation Actions:

Additional relevant conservation actions for this species are assigned within broader taxonomic groups in Maine's 2015 Wildlife Action Plan: Element 4, Table 4-1.

Habitat Based Conservation Actions:

Additional conservation actions that may benefit habitat(s) associated with this species can be found in Maine's 2015 Wildlife Action Plan: Element 4, Table 4-15. Click on the Habitat Grouping of interest to launch a habitat based report summarizing relevant conservation actions and associated SGCN.

The Wildlife Action Plan was developed through a lengthy participatory process with state agencies, targeted conservation partners, and the general public. The Plan is non-regulatory. The species, stressors, and voluntary conservation actions identified in the Plan complement, but do not replace, existing work programs and priorities by state agencies and partners.
